

ET PRODUCTS

ET Products is proud to offer top quality products at competitive prices. Our goal is to create a partnership with our customer by offering a premiere additive package and providing direct access to our fully trained, industry savvy sales and customer service team members. ET Products continues to be a family owned and operated business that takes pride in its high quality products and customer loyalty. We stand behind our products and the engines they service.

- » Own and operate two bottling plants providing us full control of production.
- » 24-hour turnaround on all shipments.
- » Shipment Tracking to help monitor deliveries.
- » No Touch Freight. Deliveries made where you designate. No assistance needed in unloading process.
- » Complete in-house lab support with 24-hour turnaround.
- » Competitively priced with Best in Class products.

INDUSTRY LEADER IN QUALITY FUEL ADDITIVES

- | | |
|---------------------------|---------------------------------------|
| » Research Driven | » On-Site Blending/Packaging Facility |
| » Engineered Tested | » Market Focused |
| » Proprietary Formulation | » Customized Treatment Program |

ET Products fuel additives have been reformulated to offset the negative effects of Ultra Low Sulfur Diesel (ULSD) caused by the hydrotreating process. Our diesel fuel additives offer our customers breakthrough solutions for fuel economy, emissions, power restoration, and compatibility with biodiesel blends. With new age detergents, lubricity and combustion improvers, rust and corrosion inhibitors, fuel stability and winter operability technologies, we make it our business to stay ahead of the times in order to give our customers the most competitive advantage possible.

1795 BIO-FLO

BIO-FLO is a third generation fuel flow improver that contains a unique wax dispersant that helps keep wax in suspension.

BIO-FLO is formulated to treat diesel fuels, which are blended with Bio-Diesel Fuels.

With special formulating, ET Products is able to couple special co-polymers that have a drastic impact on the modification of heavy and hard to treat waxes which can result from the blending of bio-diesel in diesel fuel.

Fuels that will not react to conventional wax modifiers can now be treated with BIO-FLO to achieve even lower operability of the fuel.

Please Note: Not all Bio-Fuels are the same. Some may be harder to treat and require a stronger treatment ratio than others. As in the case of all diesel fuels and alternative fuels, equipment not operating for 8 hours or longer is more vulnerable to cold weather fuel, related problems than engines that are in operation. Moisture will also be a greater problem in Bio-Diesel because of its solubility with water.

BENEFITS

- Anti-gel agent lowers filterability of the fuel 12-24F below the cloud point of the fuel
- Proprietary blend of Cold Flow Inhibitors and Heavy Wax Modifiers to maximize cold weather operability
- Wax dispersant helps keep wax in suspension
- Contains LYVAN which replaces lubricity lost due to the removal of sulfur in the production of Ultra Low Sulfur Diesel Fuels

1480 CLOUD BUSTER PLUS

CLOUD BUSTER PLUS is a third generation fuel flow improver that contains a special water de-icer and unique wax dispersant that keeps the wax in suspension. This unique additive helps prevent large wax build-up at the bottom of the tank. Bio-diesel fuels may require a stronger treatment ratio as they are typically harder to treat fuels.

Cold weather start is always a problem because of the wax that has settled to the bottom, which is drawn straight into fuel filters. Most fuel improvers cannot overcome this high concentration of settled wax, which quickly coats fuel filters. CLOUD BUSTER PLUS disperses this wax evenly throughout the fuel which allows the flow improver to break up the wax crystals into smaller particles to vastly improve filterability.

CLOUD BUSTER PLUS contains an improved Fuel Stabilizer/Anti-Oxidant Additive, which vastly improves long-term storage life of Ultra Low Sulfur Diesel Fuel and minimizes the formation of sludge resins, varnishes, lacquers, carbon deposits and the darkening of diesel fuel. CLOUD BUSTER PLUS also contains LYVAN for better lubricity and reduction in wear on fuel system components in Ultra Low Sulfur Diesel Fuels.

BENEFITS

- Anti-gel agent lowers filterability of the fuel 12-24° F below the cloud point of the fuel
- Proprietary blend of Cold Flow Inhibitors and Heavy Wax Modifiers to maximize cold weather operability
- Wax dispersant keeps wax in suspension and helps prevent wax build up at bottom of the fuel tank
- Anti-icer protects fuel from freezing
- Outstanding injector cleanliness
- Contains LYVAN which replaces lubricity lost due to the removal of sulfur in the production of Ultra Low Sulfur Diesel Fuels
- Fuel economy improvement up to 6.5%
- Reduced exhaust emissions up to 19.7%
- Heavy-duty dispersancy for insoluble gums
- Vastly improves fuel stability for longer storage
- Metal deactivator for outstanding corrosion protection
- Noticeable differences in drivability improvement, reduced combustion noise, and increased engine component life
